More

Innovative products all to do with casting

pico-pattern

Self-curing universal modelling resin according to MDT
Rainer Semsch.

picobello plus

The new generation of light-curing modelling resins.

Sandblasting agents

pico-edelkorund and pico-glanzstrahlperlen in practical dosage bags.

Speed investment rings

Investment without metal rings.
Three-dimensional expansion.
Perfect fit.

Free timer

For your first order of picodent[®] investment materials during the campaign period:
02.02.- 30.04.2018

You can find the entire picodent[®] product range online at:

picocast SP speed

Speed-casting investment material for the model casting technique

picocast SP speed is a phosphate-bound precision investment material for the model casting technique. It achieves an excellent accuracy of fit and extremely smooth metal surfaces.

Whether silicone or gel: universal suitability in all duplicating processes.

YOUR BENEFITS AT A GLANCE:

- ✓ Easy handling
- ✓ Smooth surfaces with strong edges and accurate in every detail
- ✓ Suitable for silicone and gel duplication
- ✓ Excellent flow properties
- ✓ Versatile use: speed-casting or conventional techniques

Starter box picocast SP Speed

12 bags à 200 g powder, 500 ml liquid,
50 ml measuring cylinder and
processing tips

29,50 €

picovest[®] universal

Phosphate-bound precision speed-casting investment material

The universal phosphate-bound precision speed-investment material for crown and bridge techniques and all press ceramics.

The broad range of indications facilitates the workflows in your laboratory.

YOUR BENEFITS AT A GLANCE:

- ✓ Highly economical, one for all
- ✓ Easy and comfortable devestment
- ✓ Excellent flow properties
- ✓ Also suitable for systems without investment rings
- ✓ Versatile use, for both speed-casting or conventional techniques

Starter box picovest[®] universal

12 bags à 150 g powder, 500 ml liquid,
50 ml measuring cylinder and
processing tips

34,50 €

picovest[®] royal

Graphite-free phosphate-bound precision investment material

Discover the new investment material for particularly smooth and accurate casting results. Exceptionally suited for use with NPM alloys in particular.

Owing to a special mixing process, this newly developed formulation has another advantage: Extremely finely distributed additives link the grain structures to form a dispersion. This bonds the dust particles and prevents them from reaching the breathing air.

YOUR BENEFITS AT A GLANCE:

- ✓ Perfect matching of expansion fluid and investment material for non-precious metal alloys
- ✓ Dust-reduced formula, active contribution to occupational safety
- ✓ Easy and comfortable investment
- ✓ Particularly suited in combination with the light-curing picobello plus modelling resin and the new self-curing pico-pattern modelling resin
- ✓ Versatile use: speed-casting or conventional techniques

Starter box picovest[®] royal

12 bags à 150 g powder, 500 ml liquid,
50 ml measuring cylinder and
processing tips
