picobello plus gel, crystal blue

Light-curing modelling resin

A new generation of light-curing modelling resin for dental technology applications, especially for milling and attachment work.

Patterns can be tried out in the mouth prior to moulding or milling. The high translucency of picobello plus gel allows the thickness of the layers to be checked more easily, especially when modelling and finalising.

picobello plus gel can be applied directly from the dosage syringe.

picobello gel

Light-curing acrylic resin for modelling

Light-curing modelling resingel supplied in dosing syringe, particularly for milling and attachment work, crowns and bridges and the interlocking of cast objects on the model and in the mouth, etc. – flowing application with high stability. picobello gel und picobello form are compatible and can therefore be used very well together.

picopreci plus

Light-curing precision acrylic resin

For fine corrections in acrylic resin, the sealing of micro-gaps and much more.

picopreci plus is a light-curing precision resin for use in the dental practice and laboratory.

The gel is ideal for fine adjustments in acrylic, sealing of micro-gaps, quick reattachment of teeth on dentures, production of denture saddles, implant edge design, precise work directly in the mouth, e.g. for the closing of screw channels, and many other purposes. picopreci plus is easy to process, has high stability and excellent modelling properties.

picopreci plus is available in pink, pink opaque (34), tooth colour and transparent.

Further advantages:

- High stability
- Very economical dosage
- Good moulding properties

Areas of application:

- Reparation and supplementations and correction of adjusted bite splints
- Positioning and fixing of functional elements of ortho-units, x-ray and drilling templates
- Fabrication of individual fixing and implant keys
- Fine corrections on acrylics (e.g. papillae)
- Design of papillae
- Repair of transitional prostheses
- Enables precise work in the oral cavity, e.g. sealing of screw channels

picobello form

Light-curing modelling resin

picobello is a light-curing modelling resin for making precise attachments, telescope and conical works, super-structures, implant abutments, etc.

picobello is available as a gel and now also as picobello form modelling material for swifter work with the application of larger material volumes, e.g. when making fixation and transfer keys.

When applying with the syringe or modelling by hand, you always get the right consistency for every application.

picobello gel and picobello form are compatible and can therefore be used well together.

pico-light LED

LED polymerisation lamp

The pico-light LED is a leading-edge, high-performance light-curing device for curing light-curing precision materials in the laboratory

Perfect curing in a matter of seconds, designed for use with all light-curing precision materials from picodent®, simple operation and extremely high-performance (allows more than three hours of continuous operation).
